Geometry G
 Reflections Worksheet 1
 Find the coordinates of the vertices of each figure after the given transformation.

1) reflection across the y-axis

2) reflection across the x-axis

3) reflection across the y-axis

4) reflection across the x-axis

5) reflection across the y-axis

6) reflection across the x-axis

Name: _____ Score: _____

Multiple Choice

Sheet 1

Choose the correct transformation.

1) a) reflected, then translated
 b) rotated, then translated
 c) rotated, then reflected

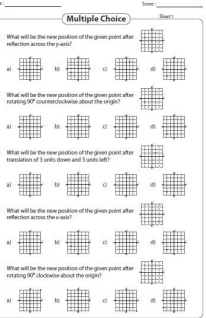

2) a) translated, then reflected
 b) reflected, then rotated
 c) translated, then rotated

3) a) rotated, then translated
 b) translated, then reflected
 c) reflected, then rotated

4) a) rotated, then reflected
 b) translated, then rotated
 c) reflected, then translated

5) a) translated, then reflected
 b) rotated, then reflected
 c) rotated, then translated

6) a) translated, then rotated
 b) reflected, then translated
 c) rotated, then reflected

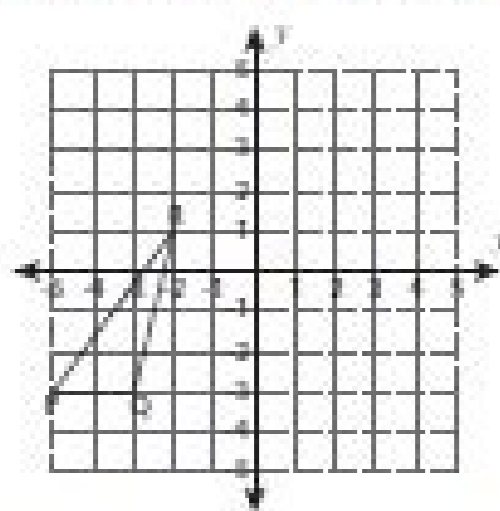

Transform the Triangles

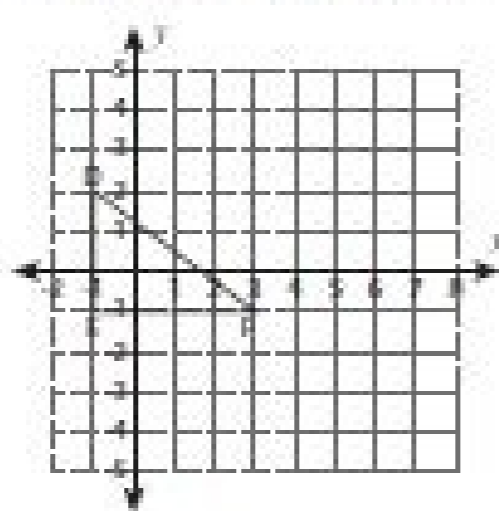

Sheet 1

Graph the image of each triangle after the given transformation.

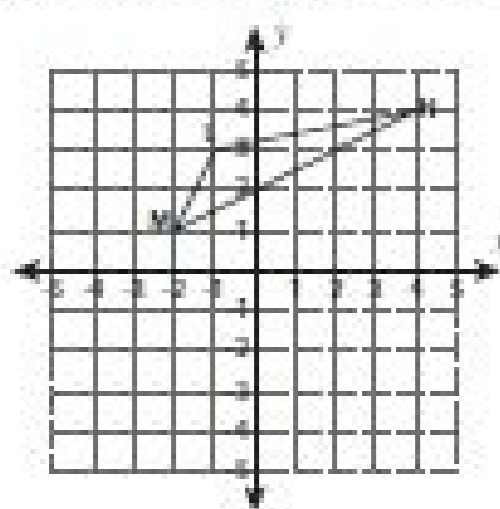

1) Translate 2 units up and 7 units right

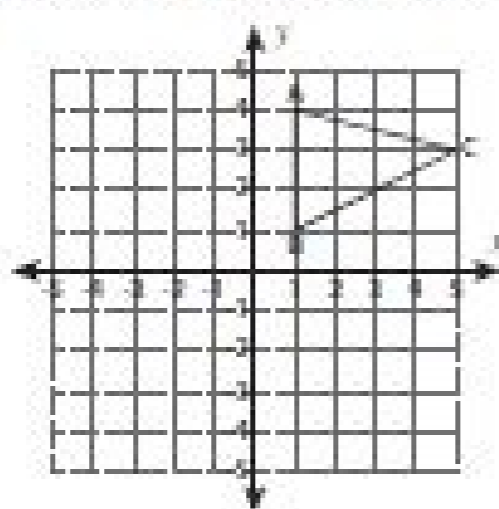

2) Reflection across the line $x = 3$

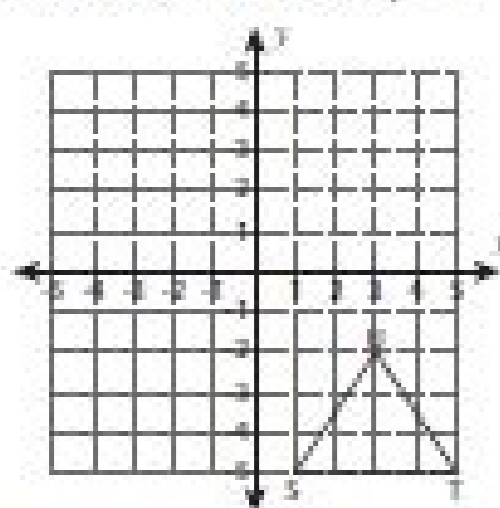

3) 90° clockwise rotation about the origin

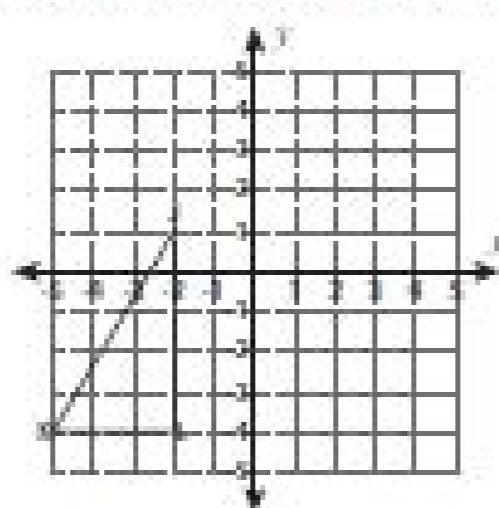

4) Translate 4 units left and 6 units down

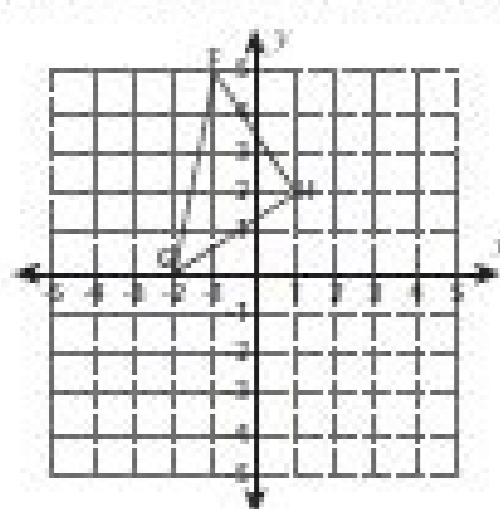

5) Reflection across the line $y = -1$

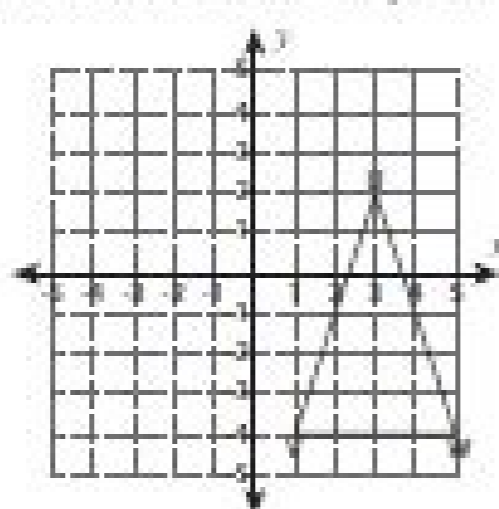

6) 90° counterclockwise rotation about the origin

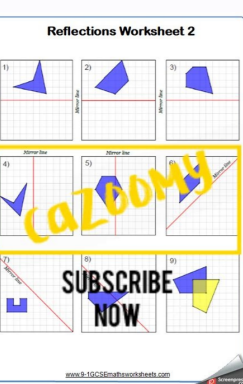

7) Translate 5 units down and 1 unit right

8) Reflection across the line $y = x$

Printable Math Worksheets @ www.mathworksheets4kids.com

@ Plan of MathematicsProf / Twitter in advance for most parents, students carry specific objects for home as homework, and they simply have to be ready to help with what they have given. @ Mathcoachcorner / Twitter collaborates with teachers and parents, whether you are a teacher or a parent, it's always a good idea to collaborate with each other. As a result, some could try to escape only with the minimum essential to get a rating of passage. @ MathematicsProf / Twitter Other from demandswerdered.net if you do not encourage you to understand the storage from the beginning, students could be on the shabby foundations while mathematics becomes progressively more difficult. If you are not sure where to start, take a look at these tested ways to help students with math. With a positive approach, you may be surprised to see how many progress start your child to do. In short, this means that some problems can be solved more than one way. Don't postpone giving them awards for their hard work! They shouldn't wait until they reach great things like getting the reference cards and exceptional test scores. Giving students a little control over how to learn allows them to adapt and incorporate their strengths, and also transmits your belief in their abilities. This makes mathematics important for more than just a degree on a report card. He doesn't let him do it! Instead, he raises the bar with even bigger challenges to send a powerful signal that they always expected to do their best. @ MathematicsProf / Twitter Be positive The brains for children are like sponges, and absorb all kinds of observations and suggestions from adults - both positive and negative. Lift the ok bar, each student does not fall in love with mathematics, even afterwards Built their confidence and show them that they can learn. Above all, stay positive and does not express a negative attitude that your child is likely to be imitated. @ Mathcoachcorner / Twitter customize mathematics tasks Sometimes he works in very interesting ways. They are much more probability to be excited about a task they gave. He works to build trust from the beginning - perhaps with a fun game that strengthens the concepts of initial mathematics. @ Mathcoachcorner / Twitter Apply mathematics to the real world scenarios when you talk to students, it becomes clear that one of the key problems with math for many of them is that it simply seems too abstract for them. For example, if students are struggling to understand how a fraction with a larger number on the bottom could be less than a fraction with a smaller number below, introduce some real life objects "as perhaps the big biscuits - and let them explore them Differences between dividing something in 10 pieces against dividing it into four pieces. That you are a parent who helps your child at home or in a teacher in class, facing the process with the right teaching methods can make a big difference. While certainly it is true that some students include the concepts of mathematics more quickly than others, everyone can learn math with the right techniques and tools. They feel like that because they do not understand all the ways in which mathematics refers to everyday life in the world Real - so show them! Application of equations, formulas and geometry to common tasks that can see and participate help students understand here NTO is important to. eraf. erat onilgov ehe 2Aic erelilgecs eraicsal e izicrese isrewid erarperp itsertop _eratalpmoc ad oroval id oilgof nu o oizicrese id oizicrese nu orol erad id ecevni ,oipmese dA .etiv ertson ellen etnatropmi Reward Progress No matter what subject you're working on with your child or student, it's important to reward progress. In fact, some students find math to be difficult and dislike it so much that they do everything they can to avoid it. In the sports world, this often comes in the form of medals or trophies. Math may feel a little abstract when they're young, but it involves skills they will need in life long after they're out of school. Teachers should keep parents informed about exactly what they've been doing in class, while parents are generally the ones called on to help out at home on a more one-on-one basis. @memesxmoney/Twitter Prioritize Understanding, Not Memorization In the academic world, too much emphasis is sometimes placed on memorizing information for exams. It's critical to be vigilant about what you say when it comes to talking about math and helping them with it. Even if you start to feel frustrated yourself, take a short break to relax and then seek guidance from online sources or another person to help you figure it out. That might work in a history class, but for math, it's critical to really understand the mathematical concepts to achieve long-term success. @MathCoachCorner/Twitter Big ideas in math tend to naturally inspire curiosity, but curiosity is a valuable tool even for basic concepts. They will enjoy it a lot more than a certificate or badge. Build Confidence Some students who struggle to understand certain math concepts become discouraged and start believing that math simply isn't for them because they aren't at any good at it. @MathCoachCorner/Twitter Additionally, letting their curiosity guide them gives them a chance to discover their own passions for the particular subjects they may enjoy most. When that's the case, it's vital to look at the Students need to know for their exams, and it takes some planning to make sure you cover all of them in detail. Reward your student with simple but interesting things like setting up a math game to play on a computer or mobile device instead of a regular study session. Be sure to encourage curiosity and questions at all times, especially when you're helping them with new or challenging ideas. This will keep you on track and help you overcome obstacles quickly. quickly.
